

CSA05-DATABASE MANAGEMENT SYSTEMS

LAB OBSERVATION

EXPERIMENT:16

AIM:

To implement function using program in MySQL.

Procedure and Syntax

Functions:

A function is a subprogram that computes a value.

Creating a function

The CREATE FUNCTION statement is also used in MySQL to support UDFs (user-defined functions). A UDF can be regarded as an external stored function.

MySQL stored function syntax

CREATE FUNCTION function_name(param1,param2,...)

RETURNS datatype

[NOT] DETERMINISTIC

.....

statements

....

Problem 1:

Create a function that returns the level of a customer based on credit limit.

(Use the IF statement to determine the credit limit).

If credit limit > 50000 then customer_level = PLATINUM

If credit limit >= 10000 AND credit limit <= 50000 then customer_level = GOLD

If credit limit credit limit < 10000 then customer_level = SILVER

RECURSION in Mysql Procedures

Mysql version should be >= 5.

Have to set system parameters. This means putting the recursion count limit.

SET @@GLOBAL.max_sp_recursion_depth = 255;

SET @@session.max_sp_recursion_depth = 255;

Problem 2

Write a recursive MySQL procedure compute the factorial of a number .

SQL QUERIES:
